

INTEGRITY TREE IMAGING

See your tree from the inside out.

Monumental

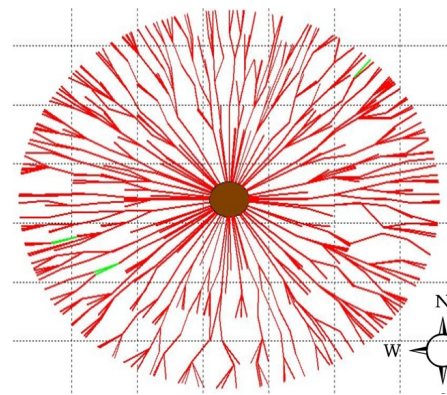

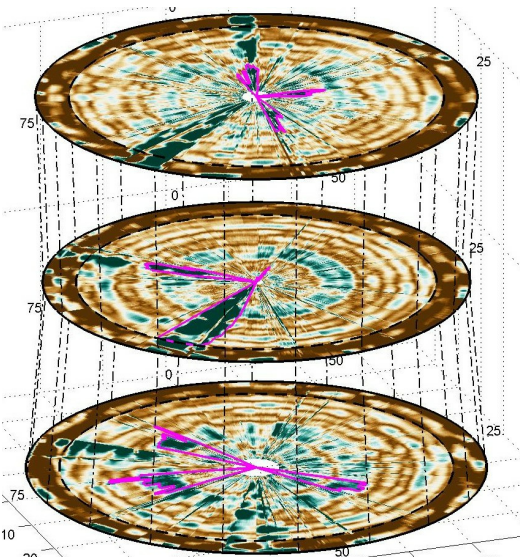

It's big up close and it's big from far away as the picture above and below left both clearly show. The lowest limbs are as large or larger than the average tree that most of us encounter daily. For approximately **300 years** this White Oak (*Quercus alba*) has stood through major storms, wars, diseases, and has always given its shade and beauty to everyone who cared to come near. However, the presence of a Chicken of the Woods fruiting body, pictured below, is causing concern for those who love and cherish this natural monument.

See For Yourself

We recently attended a tree conference that focused on the newest and latest technology from around the world that is available for advanced tree analysis. At the conclusion of the conference, two major issues stood out. First, *only* the technology employed by Integrity Tree Imaging (ITI) could display the root system. Second, our advanced tree analysis was the *only* method that is 100% non-invasive and non-destructive to the tree. These are both requirements for successful analysis of complex tree health issues like the one above.

Stay Relevant

Why operate with outdated techniques and technology? It's costing you money and decreasing your rate of successful tree care. ITI delivers the most accurate view of the critical areas of your trees (trunk AND roots). Advanced tree analysis is now an *exact science* with the in-depth analysis you can trust to be correct from Integrity Tree Imaging.
