

INTEGRITY TREE IMAGING

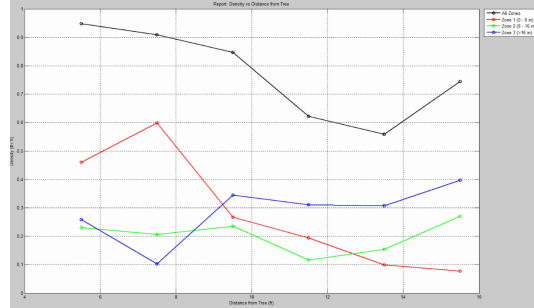

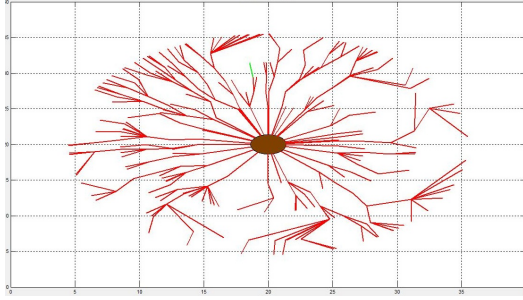

See your tree from the inside out.

How To Be "Doubt" Free

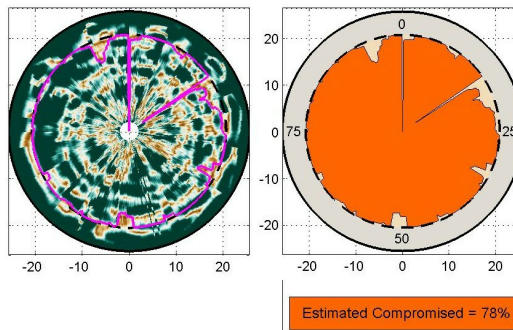

The two images below chart/plot the root system of this 49" diameter urban Willow Oak, pictured above, that received a grade of **F-Imminent Failure**. The root morphology, below left, gives a startling view of the root system that is sparse and limited due to the extremely difficult growing environment. The line graph exactly plots the severe lack of roots present underground compared to the size, weight, and height of the above-ground structure of this tree. The great advantage of exact numbers and measurements allow you to make extremely accurate tree care decisions with confidence and clearly justify those decisions. The numbers don't lie.

When In Doubt...Scan It

If the root scans above don't convince you, maybe the image below will. This residential 43" diameter Willow Oak also received a grade of **F- Imminent Failure**. In this case, the source of this severe trunk decay comes from the Chicken-of-the-Woods fruiting bodies that surround the base of the tree. The scanned image below is located at two-feet high on the trunk. This is the highest loadbearing external part of the tree. With only 22% of structural integrity present, it is easy to see the danger this tree presents. This is why seeing your tree "from the inside out" is critical to successful tree management.

No Doubt

Now is the time to be proactive and overcome your doubt and worry rather than being complacent which can be caused by doubt and worry. ITI delivers the most accurate view of the critical areas of your trees (trunk and roots). Advanced tree analysis is now an *exact science* with industry leading analysis you can trust from Integrity Tree Imaging. Give us a call now!
