

INTEGRITY TREE IMAGING

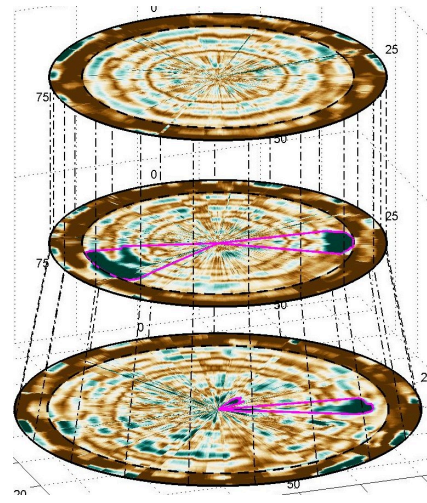

See your tree from the inside out.

One of the Biggest Ever

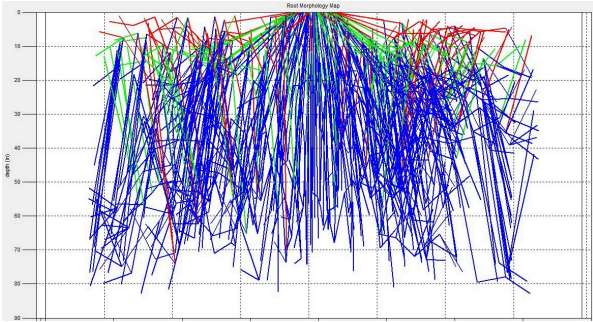

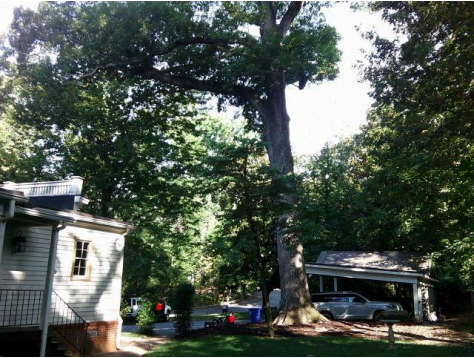

At first glance, it's difficult to believe this urban tree is real. Standing beside a large, beautiful, and historic home, it commands even greater presence. This White Oak boasts a 54-inch diameter at breast height (DBH) and is pushing 300 years old. Towering, straight, and in excellent health, the tree's first branches emerge 50 feet above the ground. Even beyond that point, the trunk retains its extraordinary girth. Its appraised value of \$60,000 reflects not only its size, but its striking curb appeal. The virtual saw-cut scans taken near the base reveal only minor decay—insignificant when compared to the tree's almost perfect internal structural integrity.

It Matters Who Looks at Your Trees

It is evident in the picture below that the tree exhibits a degree of lean. Multiple tree experts have offered opinions that contradict one another. Most opinions were not delivered with a high degree of confidence. However, one was given with confidence along with an exorbitant price for removal. How do clients make the right decision when the experts rely solely on visual inspection? The root scan below shows a massive root system extending 80" deep and beyond. A root system that is larger than the external part of the tree safely sustains this tree. Only by looking inside and underground can correct decisions be made regarding a tree that is virtually irreplaceable.

A Game Changing Decision

As of this past Friday, this magnificent White Oak was thriving and exhibiting healthy new growth in 2026. To think that a tree professional evaluated this tree (a \$60,000 value) in less than five minutes and recommended removal seems criminal. Trust is a big issue. Integrity Tree Imaging--our name is the

most important component of our business ensuring that you receive the decision that is best for you and your trees. Integrity. Not just tree analysis, it's who we are.
