IYKYK

Current Google Maps does not even show this new house on the right. Instead, it shows an old house similar to the house on the left. Truthfully, this Red Oak is much older than the homes in this neighborhood. In order for this tree to outlast this new house, we "see" that it is going to need some assistance. We know this by looking at the gaps in the root scan below.

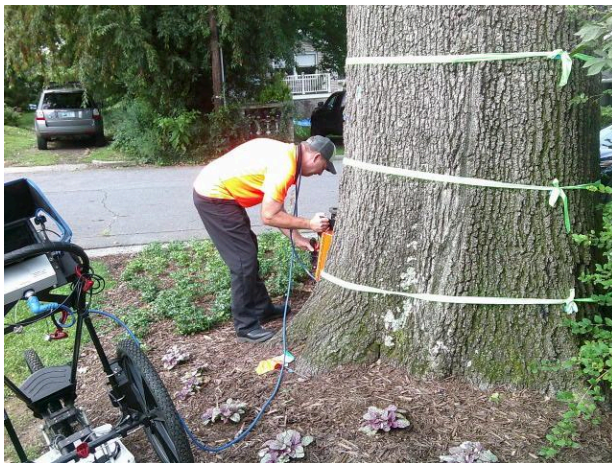

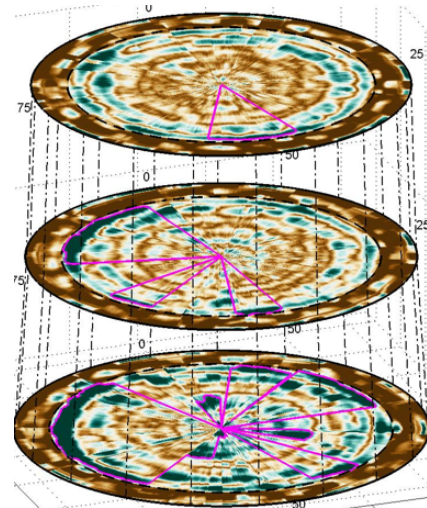

Critical crown roots are missing directly opposite of the new house. This is a HUGE benefit of being able to "See Your Tree from the Inside Out."

Wouldn't You Like to Know?

So, has the inside of the trunk declined at the same rate as the roots and vice versa? The canopy is perfect. The tree seems to be free of disease. There are no fruiting bodies present. Without imaging from ITI, you will never know the answer to these two questions. Both are critical in order to provide the proper care for this tree to live long into the future. Until now, 100% non-invasive tree evaluation has not been technically feasible. Especially not in an affordable and non-destructive assessment. We make what has been deemed out of reach easily affordable and accessible every single day.

Now You Know

Advanced tree analysis using *100+-year-old GPR* (ground penetrating radar) technology verified and resolved the questions about the Red Oak's condition,

feasibly and affordably. Contact us and experience "total tree access"—the *digital transformation* of how trees are diagnosed, evaluated, treated, managed, and ultimately protected. Join the fast-growing group of professionals that are taking their tree work, customer service, businesses, and organizations to a higher level of capability, profitability, and ultimately success. Come get "In the Know" with ITI today!
