Mission Critical

This splendid White Oak is located in a high elevation development that receives strong winds, large amounts of rainfall, and significant ice and snow accumulations. This setting, coupled with the people and property immediately surrounding this tree, certainly meets the "Mission Critical" threshold. Based on three-and-a-half years of looking at root systems, quality of soil, growing environments, and levels of trunk compromise, we know this sized tree is

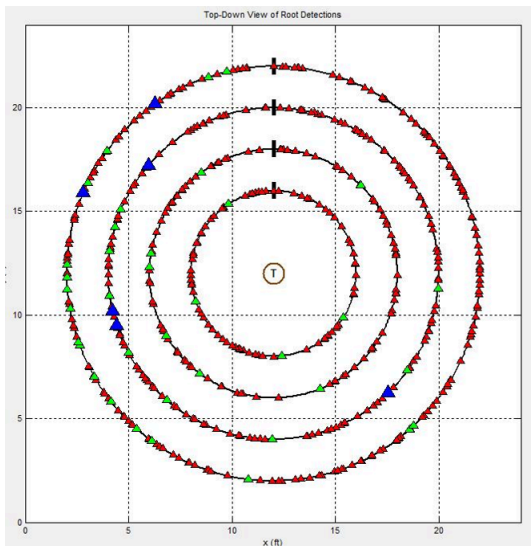

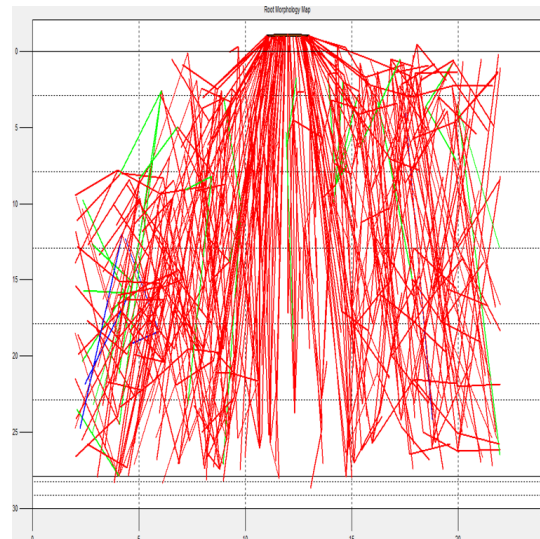

vulnerable to deficiencies that are NOT easily detectable by other tree analysis methods.

No Margin for Error

Not only do the weather conditions present a tremendous challenge, the 75% grade of the bank where the tree is located can be viewed by some as problematic. Adding to the dilemma of the tree's setting is the wooden deck four feet from the tree and the house foundation nine feet from the tree. All of these scans were successfully obtained on this very steep incline and through the wooden deck with NO destruction to the bank or the deck. The density scan above, the root size scan and root depth scan below--all support a high degree of confidence in the ability of this tree to safely remain as the focal point of the landscape of this valuable and enjoyable mountain retreat.

Expand Your Services at No Cost to You

Dazzle your clients/employer with never-before-seen analysis. Provide them with "total tree access"—the *digital transformation* of how trees are diagnosed, evaluated, and ultimately protected. Join the fast-growing group of professionals that are taking their businesses, customer service, and organizations to a higher level of capability and profitability. We want YOU to be the heroes!
